

SARVAM AI HACKATHON • 2026

कहानी खुद की

KAHANI KHUD KI

The story whose hero is YOU.

A live, interactive, self-illustrating AI audio drama for children — in 11 Indian languages. The child gives their name, steps inside the story, and steers it with their voice.

github.com/mohitpaddhariya/kahani-khud-ki

Kids' stories today are a one-way street

200M+

paying audio-story listeners on Pocket FM & Kuku FM — every minute of it LINEAR and pre-recorded

0

mainstream products where the child is INSIDE the story — named, spoken to, and listened to

22+

scheduled Indian languages — yet urban kids drift from their mother tongue every year

*Passive screens. Linear audio. **Nobody had built a story a child can step inside, in their own boli.***

THE IDEA

Radio drama × Bandersnatch × a picture book that draws itself

1

Tell us your naam

Type a name, pick a world — the landing speaks your language

2

The cast speaks TO you

Every character has its own voice; they call the child by name

3

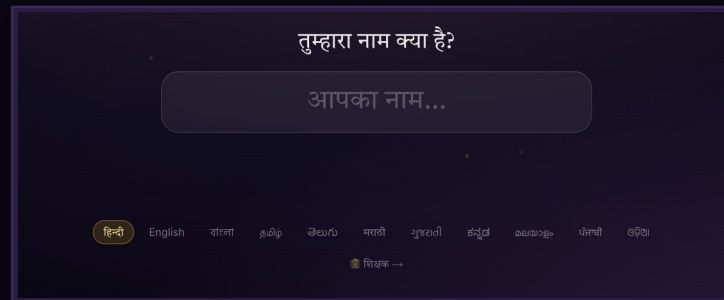

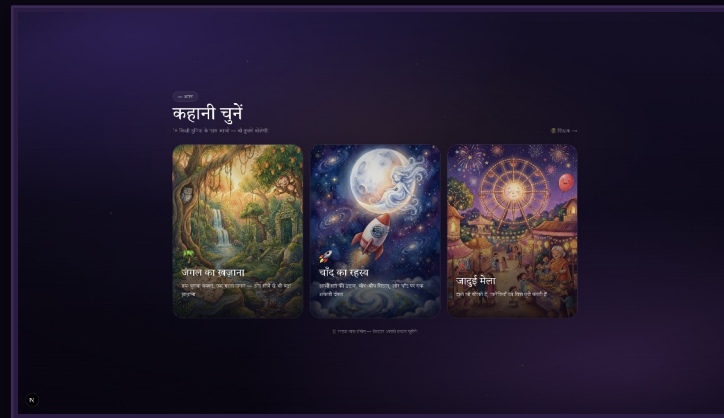

Answer out loud

A character asks what to do next — the child replies by voice

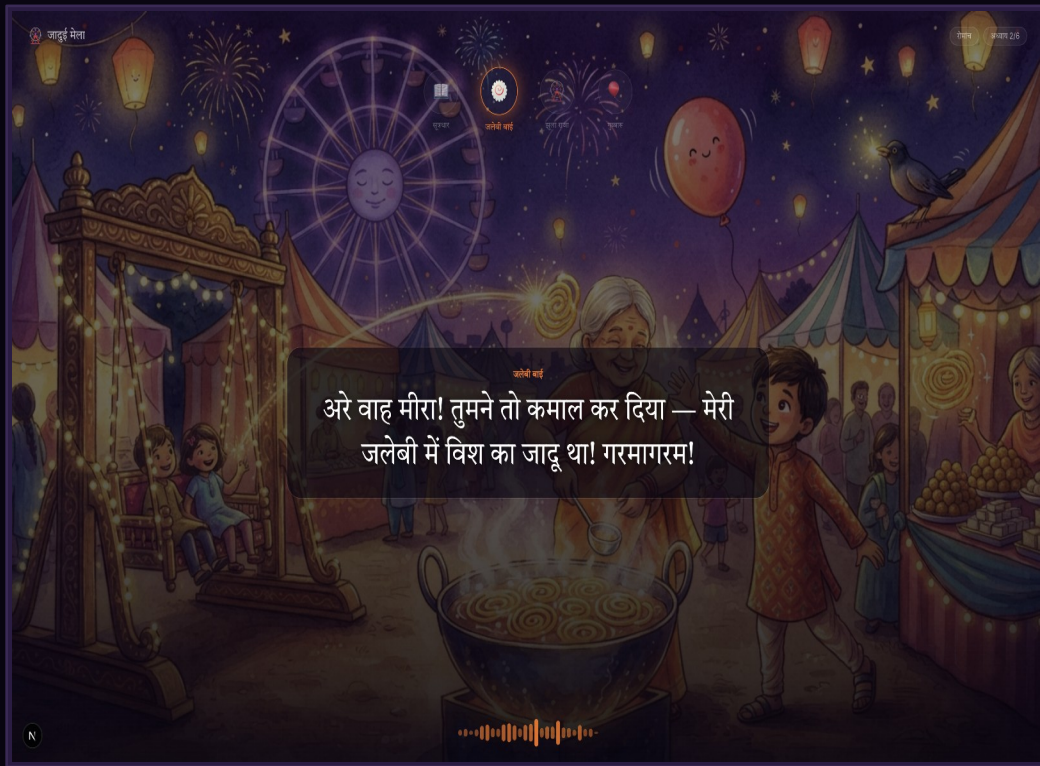

4

The story bends to you

Wild, creative answers become the smartest plot turns

Two decisions, zero forms — name, then world

अरे वाह मीरा! तुमने तो कमाल कर दिया — मेरी
जलेबी में विश का जादू था! गरमागरम!

THE MAGIC RULE

There are no wrong answers

Child (off-script):

“मैं नक्शे पर जादुई पिज़्ज़ा रगड़ूंगा!”

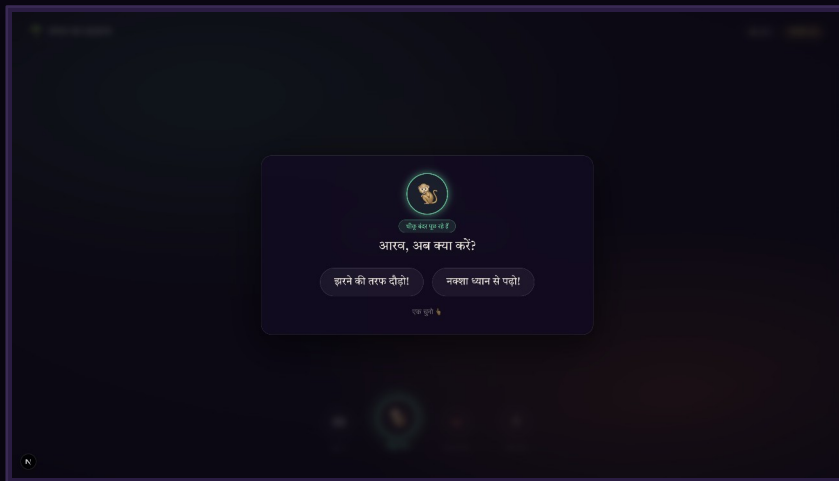

Next beat, live:

“तुमने नक्शे पर पिज़्ज़ा रगड़ा — और जादू हो गया! स्याही सुनहरी चमक उठी...”

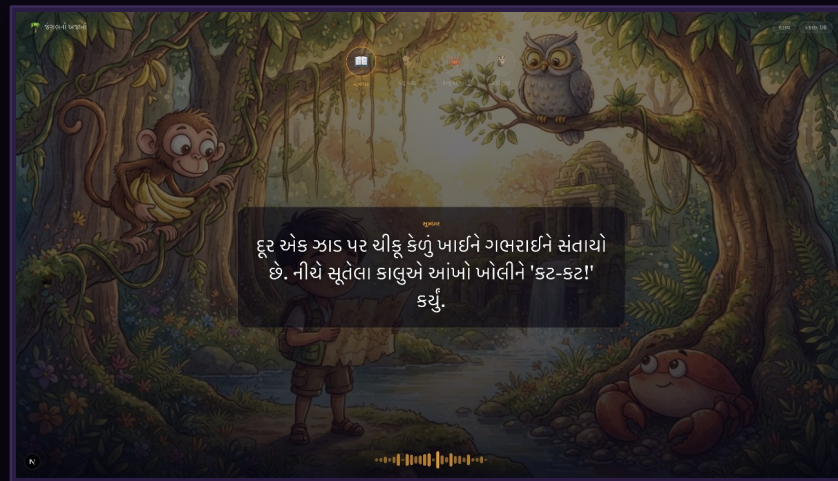

- Consequence-first beats — your answer visibly steers the plot
- A cliffhanger lands right before every question
- The story calls back to the child's earlier ideas

A real beat from a live run — the backdrop painted seconds earlier by Nano Banana

Every narration line paints its own picture

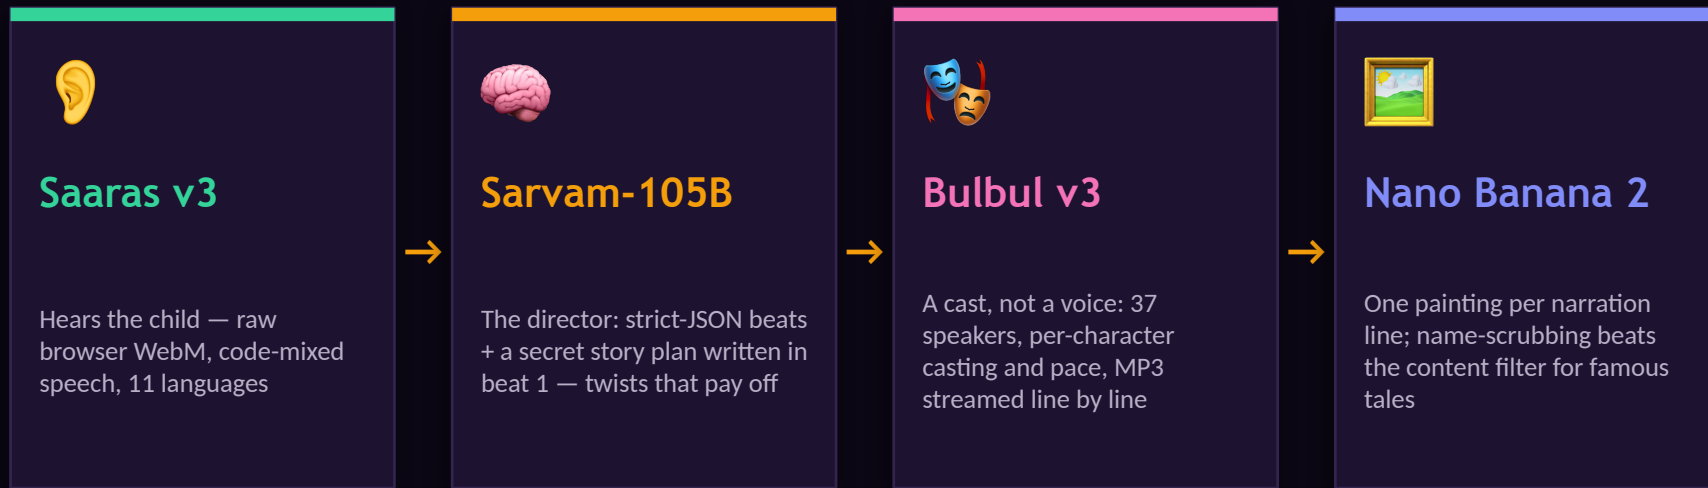

Chiku the monkey turns to the child and waits for their voice

Same engine, fully in Gujarati — story, cast, UI, everything

Nano Banana 2 Lite paints each line in ~5s with a per-world art bible for consistent characters • **11 languages, one engine**

Under the hood — the full Sarvam stack

⚡ **Zero-wait forks:** while a chapter is still playing, BOTH possible next chapters are speculatively generated — answering starts the next beat in ~2s (was 8–16s). Voice and subtitles always start together.

TEACHER MODE

Built for classrooms, not just bedtime

Thought → World

Teacher types “पानी बचाओ” — a full story world with cast, voices and art appears in ~15s

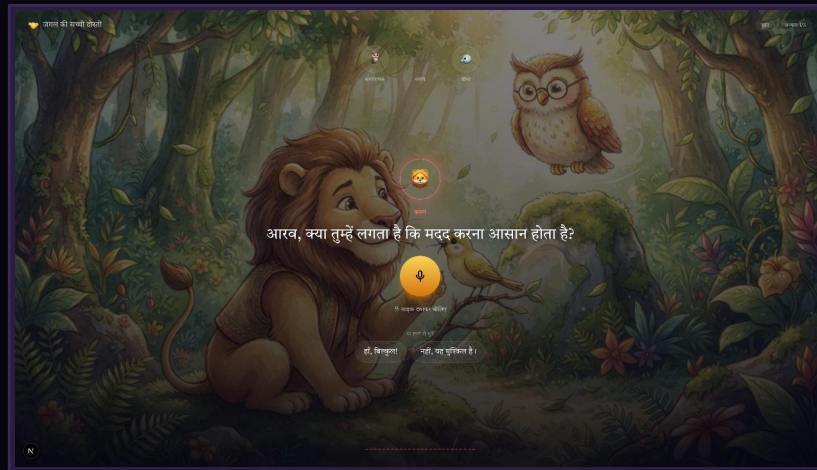

Story → Drama

Upload any .txt — Aladdin, Panchatantra, her own tale — performed multi-voice with comprehension questions

Report Card

Evidence-based: 5 skills scored from the child's ACTUAL answers, growth framed kindly, next activity suggested

A teacher's Panchatantra story on stage — her characters, cast onto voices, painted live

Report card generated in ~10s, fully localized ✓

Engineered to survive a live stage

The show cannot die

A hand-written 5-beat fallback story takes over silently if any API fails mid-demo

Tier caps, beaten

2048-token output cap → two-call adaptation + truncation-repairing JSON parser

Content filter, beaten

Famous names (अलादीन!) trip the image filter — cast-name scrubbing keeps pictures flowing

Mic can fail? Fine

Every question also has tap chips; venue Wi-Fi and noise were design inputs

11 languages

Story, voices, questions in all; full UI chrome in Hindi, Gujarati, English

Production clean

Typed end-to-end, lint + prod build green, verified with live E2E runs

Next: streaming beats · storybook PDF keepsakes · parent progress app

हर बच्चा, अपनी कहानी का हीरो।

Every child, the hero of their own story.
